i – Picking System

Innogreen

Overview of Picking

Picking is a major action in the order fulfilment process. Unfortunately, it is prone to a wealth of errors.

- Lost or unfulfilled order
- Pickers picked the wrong items or quantities
- Not finding the correct items in the locations
- You can't trace who has picked an order
- Reliant on people remembering where things are
- Labour-intensive picking

What is i-Picking?

Commonly known as Pick/Put to Light in the market, it is a light directed systems that use indicator modules mounted to storage equipment to help pickers identify the correct locations and quantities to pick in a much clearer and simpler way.

Developed by Shenzhen Ruiyibo Technology Co. Ltd

Located in Shenzhen, China

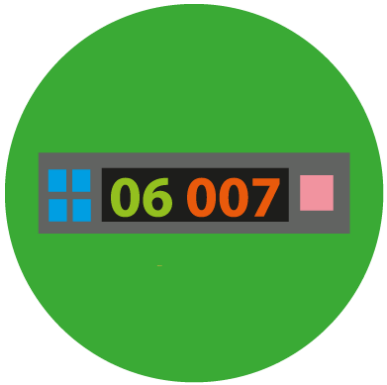
How i-Picking Work?

The picker starts a pick list by scanning the list using a barcode scanner.

The mounted module lights up with the location and quantity to pick

The picker presses the button to acknowledge each pick

The picker repeats the process until the pick list is completed



Advantages of i-Picking

01 **Reduced** picking errors

02 **Reduced** labour costs

03 **Reduced** training time

04 **Reduced** walking distance

05 **Increased** picking rate

06 **Improved** picking accuracy

07 **Increased** efficiency

08 **Paperless** picking

Integration of i-Picking
